

Visual inspections, CCTV and endoscopy.

Background

To support non-destructive inspections KEMA employs a range of endoscopes and a CCTV system. Video endoscopes allow recording of images on photograph as well as on video tape/CD/DVD.

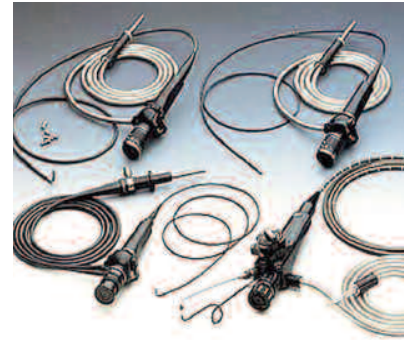

One system is suited to inspect boilers and gasifiers during operation at 1,500°C. This system can be connected to a pyrometric system.

A small diameter endoscope (ø1mm) is available to inspect, for example, hollow-structured blades and vanes of gas turbines.

Benefits

- Quality images of inspected areas to support management decisions
- Equipment available in a wide range of lengths and diameters: flexibility
- Broad experience with larger structures as well as with smaller objects, ensuring quality advice by KEMA
- Rapid deployment around the world.
