

***KEMA*** 

- “KEMA offers much more than I anticipated. Because the company covers the whole chain of power generation, transmission and distribution, your career is wide open.” Chris, trainee
- “This job requires deep technical knowledge and close customer interaction – a challenging combination.” Peter, test engineer
- “The markets in which KEMA operates are extremely dynamic. So, you too have to be dynamic, constantly alert to new developments.” Mereille, consultant
- “I travel a lot and see many different companies, all with their unique identity and working environment. This makes my job truly diverse and always interesting.” Jos, auditor
- “Society expects safe, sustainable and affordable energy and products. I really feel like I’m helping to meet these expectations.” Oliver, inspector

We're looking for market-oriented technical graduates and professionals who are passionate about quality, reliability, innovation and sustainability. As a candidate, you have a strong affinity with technology, and are committed to providing customers with viable, cost-effective solutions. You're also able to share your expertise in cross-cultural teams. We provide unique opportunities for 'intrapreneurs' – people within companies who are prepared to take the initiative. You'll need courage to deal with the challenges presented by the turbulent markets in which we operate. The world of energy could turn out to be bigger than you think. Do you want to be part of it?

Just as KEMA supports golf talent to get to the top, we coach our staff so that they too can achieve their maximum potential. This is also what we do at work, encouraging our staff to deepen their technical expertise as well as enhancing their project management skills and cross-cultural awareness.

Interest in golf is growing strongly around the world. It's a sport that requires perseverance, total focus and strong technical skills – precisely the qualities you need at KEMA.

“When playing with the top in the European Tour, I have to be totally concentrated and self-confident. To get the right result, I need to focus 100% on each individual shot.”

Joost Luiten of Golf Team Holland

We're entering an era of smart energy-related products and services that presents three challenges. The first is to manage energy in reliable networks. The second is to ensure that future energy – and the way we use it – is clean. The third is to maintain a good return on investment. KEMA is a fast-growing international company that's equal to these challenges. We're closely involved in the way power is supplied and energy is used around the world. Working for major utilities, heavy industries and governments, as well as electrical and electronics companies, we deliver expert business/technical consultancy, testing, inspection and certification. With over 1,500 professionals and offices in more than twenty countries, our global network is expanding all the time.
